

ANEEP TANDEL

Senior Platform Engineer | DevOps & Cloud Infrastructure | Kubernetes, Ansible, Terraform, CI/CD | LLM, Agentic AI

Germany | +49 163 6587002 | aneepct@live.com

LinkedIn: [linkedin.com/in/aneep-tandel](https://www.linkedin.com/in/aneep-tandel) | GitHub: github.com/aneepct

Work Authorization: Germany Opportunity Card (Chancenkarte)

PROFESSIONAL SUMMARY

Platform and infrastructure engineer with 10+ years building, automating, and operating the systems development teams ship on. Deep hands-on ownership of Infrastructure as Code (Terraform, Ansible), Kubernetes orchestration with ArgoCD GitOps, and CI/CD automation across Bitbucket Pipelines, GitHub Actions, and Jenkins. Experienced across both public cloud (AWS, DigitalOcean, Vercel) and on-premise VMware vCenter data centers, covering VM provisioning, network segmentation, firewall policy, and Cloudflare-based DNS, DDoS, and bot protection. Progressed from hands-on Linux and web server administration to designing cloud-native, event-driven, and serverless platforms, while hiring and leading distributed engineering teams across time zones. Currently extending the platform with LLM and agentic AI systems, including Agentic RAG services and AI-driven Kubernetes autoscaling.

TECHNICAL SKILLS

Infrastructure as Code: Terraform, Ansible, GitOps, declarative configuration management

Containers & Orchestration: Kubernetes, ArgoCD, Docker, Horizontal Pod Autoscaling (HPA), Vertical Pod Autoscaling (VPA)

CI/CD & Automation: Bitbucket Pipelines, Bitbucket Runners, GitHub Actions, Jenkins, Git, Bash, Shell Scripting

Cloud Platforms: AWS (EC2, Lambda, IAM, VPC, Security Groups, DynamoDB, RDS, S3, CloudWatch, Secrets Manager), DigitalOcean, Vercel, Google Cloud

Virtualization & On-Premise: VMware vCenter, VM provisioning, inter-VM networking, firewall configuration, private data center operations

Networking & Security: Cloudflare (DNS, DDoS protection, WAF, CAPTCHA/bot management), Nginx, Apache2, TLS, IAM policy, PCI, KYC/KYT

Web & Application Servers: Nginx, Apache2, Gunicorn, WSGI/mod_wsgi, FastCGI, WHM/cPanel

Observability & Reliability: Grafana, AWS CloudWatch, logging and monitoring, autoscaling, high availability, disaster recovery

Databases & Messaging: PostgreSQL, MySQL, MongoDB, Redis, AWS DynamoDB, Apache Kafka, Vector Databases

AI / LLM Engineering: LLM Engineering, Agentic AI, RAG, Agentic RAG, tool-calling agents, AI-driven infrastructure automation, AI-assisted development (GitHub Copilot, Claude, Lovable)

Languages: Python, Go (Golang), TypeScript, JavaScript, Java, PHP, Dart, C++, SQL

Frameworks & APIs: Django, Django REST Framework, NestJS, Next.js, React, Angular, Vue.js, Flutter, Laravel, Spring Boot, GraphQL, REST, Swagger/OpenAPI

Architecture & Practices: Microservices, Event-Driven, Serverless, Cloud-Native, monolith-to-microservices migration, CQRS, Agile, Scrum, Kanban, distributed team leadership, technical hiring

Blockchain & Web3: Solidity, Web3, Ethereum, Polygon, ERC-20, NFT minting, on-chain/off-chain flows

PROFESSIONAL EXPERIENCE

IT Tech Lead / Senior Platform Engineer

LMNTO Performance Information Technology LLC — Dubai, UAE | Apr 2022 – Present

(Hybrid till June 2026 – Remote since 15th June 2026)

- Own end-to-end platform infrastructure for an on-premise VMware vCenter data center, codifying VM provisioning, inter-VM network setup, and firewall configuration entirely in Terraform.
- Manage Cloudflare as code through Terraform, covering DNS records, DDoS protection, CAPTCHA and bot-management policies, and edge network security controls.
- Standardize post-provisioning VM configuration with Ansible, maintaining role-specific baselines so each host is built correctly for its purpose, whether application runtime or database node.
- Run all Kubernetes deployments through ArgoCD GitOps (adopted 2 years ago), replacing imperative deploy scripts with declarative, version-controlled, auditable release workflows.
- Operate CI/CD on Bitbucket Pipelines with self-hosted Bitbucket Runners, giving builds secure direct access to on-premise infrastructure; previously ran GitHub Actions in parallel for cloud-hosted workloads.
- Deploy serverless and edge workloads to Vercel and AWS, integrating them into the same pipeline, DNS, and security perimeter as the on-premise estate for a consistent hybrid platform.

- Build agentic AI on the platform: an Agentic RAG customer support service backed by a vector database knowledge base and multiple retrieval tools, resolving technical and informational customer queries autonomously.
- Integrate an AI agent into Kubernetes capacity management, driving horizontal pod autoscaling in response to changing application load and adjusting vertical pod resource requests and limits as per-pod demand shifts.
- Drive AI-assisted development across the team, using GitHub Copilot in VS Code since 2024 and Claude and Lovable since 2025 to generate and scaffold backend and frontend code, materially increasing delivery throughput.
- Lead migration of monolithic systems to microservices and cloud-native architectures with minimal disruption, and manage distributed cross-functional teams across time zones using Scrum and Kanban.

IT Tech Lead / Senior Software Engineer

Bitex Worldwide — Dubai, UAE | Jun 2019 – Apr 2022

- Introduced automated CI/CD with GitHub Actions deploying to DigitalOcean droplets, replacing manual release steps and shortening time-to-market for new features.
- Adopted Kubernetes for backend services in 2020 and led the full migration of all applications onto Kubernetes by 2021, standardizing orchestration, rollout, and autoscaling platform-wide.
- Ran Jenkins pipelines and AWS infrastructure alongside for build automation, hosting, and environment management.
- Integrated Cloudflare for DNS management and DDoS protection across public trading endpoints, hardening the platform against volumetric and application-layer attacks.
- Led a cross-functional team delivering a high-performance crypto and forex trading platform supporting high-frequency transaction volumes.
- Delivered crypto and payment gateway integrations, on-chain and off-chain settlement flows, and NFT minting on Ethereum and Polygon, meeting PCI and KYC/KYT compliance requirements.
- Embedded DevOps practices across the engineering team, shifting deployment ownership left and improving release cadence.

Senior Software Engineer

Objects By Design — New York, USA (Remote from Gujarat, India) | Jul 2017 – Jun 2019

- Built and deployed Django REST Framework backends with Angular and Vue.js frontends, and delivered cross-platform iOS and Android applications in Flutter.
- Established CI/CD pipelines on GitHub, automating build, test, and release for backend services and frontend applications.
- Ran Linux deployments on Apache with mod_wsgi, later migrating to Nginx with Gunicorn for Django services and Nginx as the serving target for frontend production builds; integrated Cloudflare for DNS management and DDoS protection.
- Owned mobile release operations end to end, managing signing, versioning, and publication to the Google Play Store and Apple App Store.
- Delivered a home security system with advanced sensor integration for user data tracking, and a Flutter application for an online teaching platform.
- Contributed enhancements to the Google Cloud Bigtable Python client library, optimizing data retrieval workflows.

Senior Software Engineer / Software Engineer

Wingmaxx Technologies — Surat, Gujarat, India | Jul 2015 – Jul 2017

- Owned application deployment and server management across WHM/cPanel environments and bare Linux hosts, running releases end to end.
- Configured and tuned Apache2 and Nginx for frontend delivery, WSGI and Gunicorn for Django services, and FastCGI with Apache for Laravel PHP applications.
- Adopted AWS from 2016, deploying with Lambda and DynamoDB while administering IAM, EC2, security groups, and VPC network configuration alongside MySQL and DynamoDB across multiple application environments.
- Developed and maintained web applications and RESTful APIs using Laravel (PHP) and Django (Python).
- Hired and managed developer teams from Aug 2016, owning technical direction, code quality standards, and delivery timelines.

EDUCATION

Bachelor of Technology, Aerospace Engineering — IGNOU, New Delhi, India | 2010 – 2014

Diploma, Electronics and Telecommunication Engineering — IETE, New Delhi, India | 2006 – 2009
